Introducing Prena1 PEARL

The **ONLY** Authorized Generic Prenatal Multivitamin
with FOLMAX™, FePlus™, and pur-DHA™*

FOLMAX™

Immediate and modified release folic acid

A proprietary, immediate and modified release folic acid designed to help maintain beneficial levels of folate in a woman's body throughout the day.

Prena1 Pearl provides 1.4 mg of folic acid as FOLMAX in each daily softgel.

Did you know?

Nearly half of all pregnancies in the United States are unplanned. This makes getting enough folic acid important – whether a woman of childbearing age intends to get pregnant or not.

FePlus™

Improved bioavailability, easy on the stomach iron

A proprietary, blended chelate containing iron combination that is quickly absorbed by the body and gentle on the stomach. Chelation, the process of binding iron molecules to an amino acid, stabilizes iron so it is readily absorbed into the bloodstream while being gentle on the gastrointestinal (GI) tract. Chelation is a key component of our patent pending formulation.

Prena1 Pearl provides 30 mg of iron as FePlus in each daily softgel.

Did you know?

Anemia, a direct result of iron deficiency, is the single most prevalent nutritional issue for women in their child-bearing years – with pregnant women having the highest deficiency rate of all at 50%.

pur-DHA™

Highly concentrated DHA, strict purity standards

vitaPearl's pur-DHA is produced using a patented, advanced supercritical CO₂ extraction and purification process. It then must meet 50 strict purity parameters before being released, and undergoes testing for peroxides; heavy metals such as cadmium, mercury, and lead; as well as pollutants such as PCBs, dioxins, and pesticides.

Prena1 Pearl provides 200 mg of DHA as pur-DHA in each daily softgel.

Did you know?

Marine-sourced omega-3s are a potent source of DHA.
